PERSONAL PROJECTS

Aswan-Med

- Developed a localized healthcare directory helping residents filter doctors by specialty and sub-area.
- Integrated Google Maps to provide dynamic location tracking and navigation for clinics.
- Implemented complex filtering logic to ensure fast, real-time search results for users.

Social Medium

- Built a distraction-free publishing platform focused on typography and user experience.
- Engineered a seamless content creation interface allowing users to write, edit, and publish posts.
- Designed a minimalist, responsive UI that ensures optimal readability across all devices.

Habitcon

- Implemented state persistence to ensure users retain their progress data between sessions.
- Programmed complex date-handling logic to calculate active streaks and navigate through past weeks.
- Architected a productivity tool enabling users to track daily routines and visualize consistency.
